The Manor is watched over by a watchful, family-type with the caretaker's name, "Christina". This figure isn't as calm as the watchman, and more likely to send the residents to investigate the unusual things that have started happening. A girl goes missing each week as the terrifying mists of "Deathbloom" get closer. The tenants soon start to disappear, leaving only the girl's teddy bear as a marker, and the remains of a breakfast spread on the once-quiet dining table. After one particularly disastrous night, Christina just happens to get a message from a cousin who works for Bachman's Realty. This cousin has a secret that could help you - she's looking to go missing and have you replace her... Q: What is this?! A: Read more about this in the Details. All this said, you were a friend. What's new:

have returned! I was doing some retro games research on the XBOX platform and came across a title called Scoot Kaboom a while ago. I then forgot all about it until I happened to be logged into Playstation.com looking at the back catalog and stumbled upon the title. I was intrigued right away and decided to check out the review. Gameplay Scoot Kaboom is a game that takes place in a 3D platformer-like 3rd-person view. You play as a ranger that has to go and save somebody's girlfriend that has suddenly been kidnapped by evil 3D monsters in the city of Sandscaper. The rangers are clearly in a rail shooting fashion as they go on shooting the bugs during their missions and searching for the missing lady. You can loot the environment and you cannot die yet, it's not a true action game or role playing game per se. The three woman are who you must save and are the three main characters that can jump and stop on pretty much any spot or corner. Well, what it has in common with the first person being they are all rail style shooters where you can crouch, walk and jump anywhere. It's just that now you're a 3rd person character and you have an open world to search and you're not limited to movement. You can shoot and loot as much as you want and you can even stop. Of course that is a complicated pixel animation itself isn't it? Now if you jump, shoot and stop you get points, it's just like in the original Mortal Combat. You can jump infinitely so it's really hard to not fall. If you don't jump you're invincible, if you jump it's like you fall but your gravity-levels don't go down. It adds to the casual game mechanics as you go jumping and flying around the environment. I think there was two endings in the game. I didn't see one of them as I went on mission too fast. Music and sounds Scoot Kaboom is surprisingly very a soundtrack-driven game. So much so that I had to go to the Playstation's download section to get the

entire soundtrack. Now, since these are arcade games their music is very intense. I mean there's a lot of sounds like burning oil, engines and what have you. I didn't pay as much attention to
